

A B S T R A C T

5 The invention relates to an assembly for treating
degeneration of a damaged intervertebral disk disposed
between two vertebrae. The treatment assembly includes
cells that may be analogous to those of the
intervertebral disk, and that are suitable for implanting
in said disk; and an intervertebral implant. The
10 intervertebral implant includes an intervertebral spacer
for placing between said vertebrae, and a fastener device
for fastening said spacer on said vertebrae.
